STRONG PARTNERSHIP

In cooperation with capable partners, leaders in their field, we have managed to develop a practical INOWA solution for wood and wood/aluminum. All system components and production tools are optimally adjusted with one another.

Sliding elements have now become a worldwide trend. They provide light in living spaces and business premises, allow a free transition between indoor and outdoor areas and save space.

The ROTO Patio INOWA fitting sets new standards when it comes to tightness with circumferential seals and active locking points in the mid-rupture. Therefore, it is also ideal for extremely strong winds.

GUTMANN MIRA, combined with its tight-fitting technology, provides modern design through straight and narrow profiles and offers great outdoor exposure using large glass surfaces.

ROTO Patio INOWA stands for innovative sliding. Due to the completely roller bearing mounted construction, the panels can be moved easily – without any friction and noise.

Locking is comfortable and requires little physical effort due to its innovative function by using high contact pressure, transverse to the frame profile.
